

TryHackMe - Cache Me Outside

Category: OSINT

Difficulty: Easy/Medium

Platform: TryHackMe

Overview

Cache Me Outside is an OSINT (Open Source Intelligence) room on TryHackMe. The objective was to investigate a retired hacker by chaining together small pieces of publicly available information scattered across the internet. Starting from a single screenshot, the trail led through fitness apps, GitHub metadata, email auto-replies, social media posts and eventually precise geolocation.

This write-up documents each pivot point and the reasoning behind it.

Tools & Resources Used

Tool	Purpose
Browser / Manual Enumeration	Profile inspection, source review
Google Maps / Street View	Geolocation confirmation
Git .patch files	Email metadata extraction
Email client	Active address verification
Komoot	Fitness/outdoor profile pivot
GitHub	Commit metadata analysis
Threads	Social media geolocation clues

Investigation Chain

Conversation Screenshot

|

Komoot Profile (Jim Lee)

|

GitHub → jim133t

|

Commit Patch → Email: jimleepro1@gmail.com

|

Email Auto-Reply → Phone: +40 743 321 239

Threads → @jiml33t

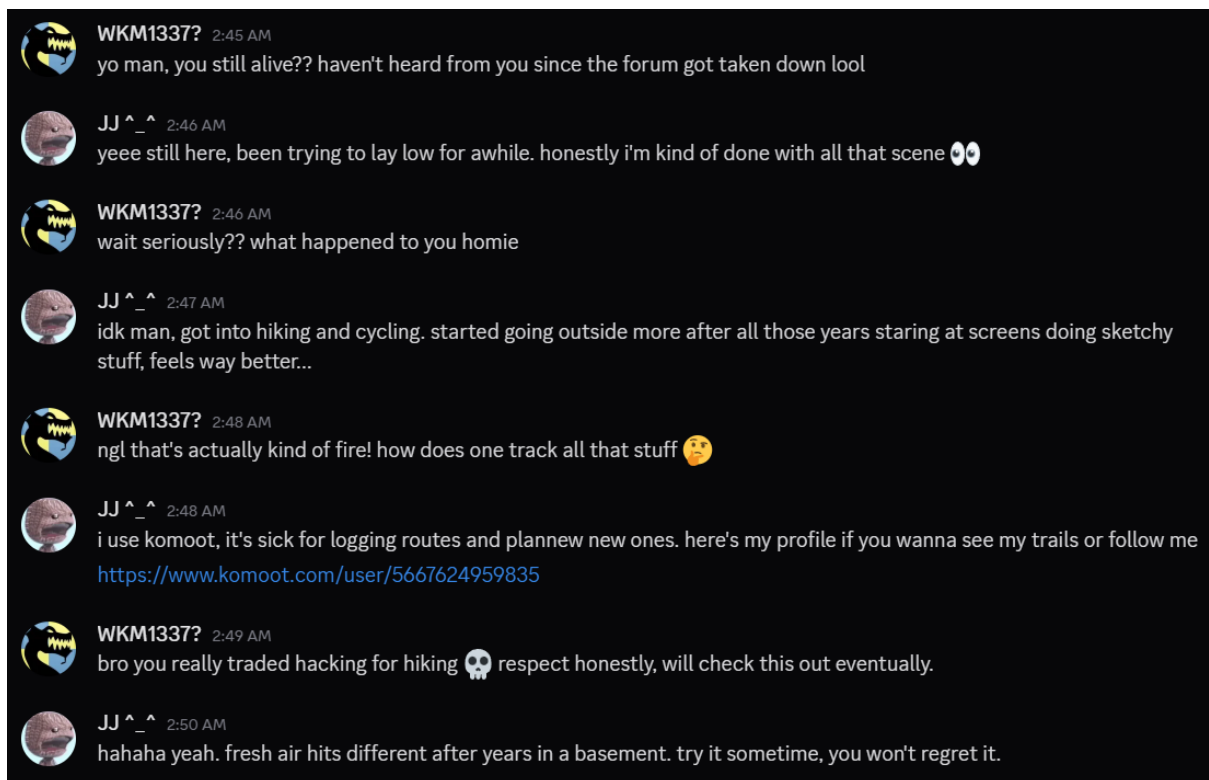

Photo OSINT → irigatii.ro sign

Google Maps → Timișoara, Romania

Tram Station → Piața Gheorghe Domășneanu

Step-by-Step Walkthrough

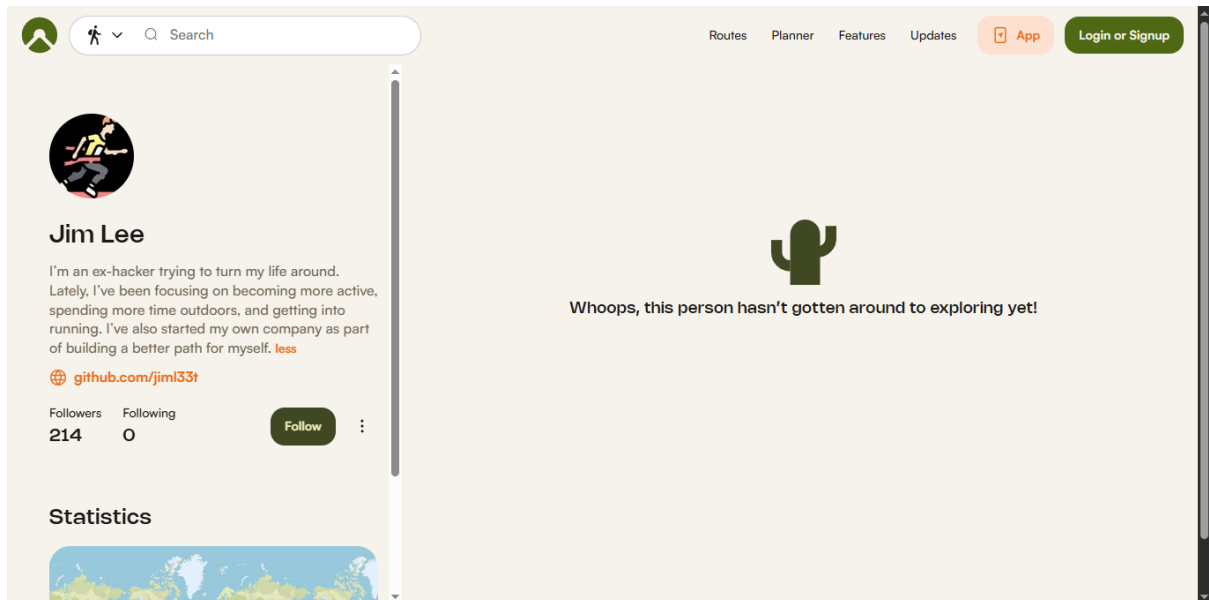

Step 1 - Conversation Screenshot

The starting artefact was a conversation screenshot provided within the room. The subject had mentioned moving away from hacking and spending more time outdoors. Buried in the conversation was a direct link to a **Komoot** profile:

<https://www.komoot.com/user/5667624959835>

Step 2 - Komoot Profile → Full Name + GitHub

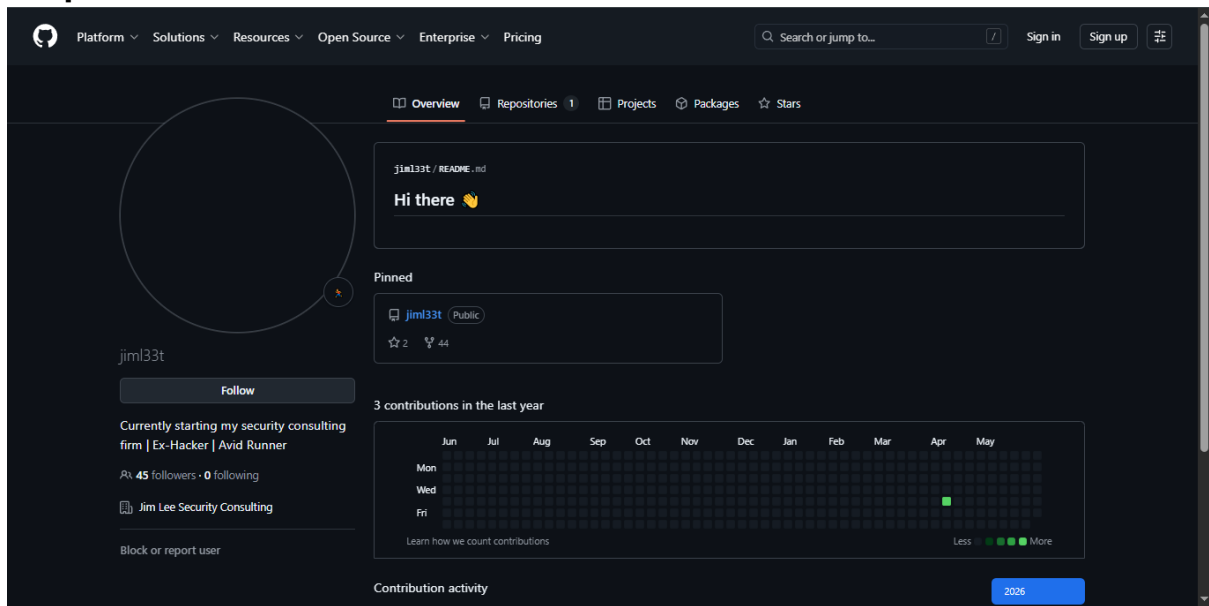

Visiting the Komoot profile revealed:

- **Name:** Jim Lee
- **Bio:** Described himself as an ex-hacker trying to turn his life around
- **Linked account:** <https://github.com/jiml33t/jiml33t>

This confirmed the real name and opened the next pivot.

Step 3 - GitHub Commit Metadata → Email Address

The GitHub profile at <https://github.com/jim133t/jim133t> had a single repository. The key wasn't the repository content itself but the **commit history**.

Initial commit hash:

7b2c8e0a540c36f2e09da5945066020621d6a059

By appending **.patch** to the commit URL, you can retrieve the raw patch file which contains Git commit metadata:

<https://github.com/jim133t/jim133t/commit/7b2c8e0a540c36f2e09da5945066020621d6a059.patch>

Inside the patch metadata:

```
From: 7b2c8e8a540c36f2e09da5945066020621d6a059 Mon Sep 17 00:00:00 2001
From: jimleepro1-cell <jimleepro1@gmail.com>
Date: Thu, 16 Apr 2020 03:22:19 -0400
Subject: [PATCH] Initial commit
```

```

+## Hi there 🙋
+
+
+<!--
+**jimleepro1-cell/jimleepro1-cell** is a 🌟 _special_ 🌟 repository because its `README.md` (this file) appears on your GitHub profile.
+
+
+Here are some ideas to get you started:
+
+
+- 📝 I'm currently working on ...
+- 🌱 I'm currently learning ...
+- 💡 I'm looking to collaborate on ...
+- 💻 I'm looking for help with ...
+- 📧 Ask me about ...
+- 📫 How to reach me: ...
+- 🗨 Pronouns: ...
+- 🍻 Fun fact: ...
+-->
```

From: jimleepro1-cell <jimleepro1@gmail.com>

Email address confirmed: jimleepro1@gmail.com

The email did not appear anywhere in the README or repository files. It was embedded in the Git commit metadata, which is a commonly overlooked exposure vector. Many developers don't realise their email is attached to every commit they make.

Step 4 - Email → Phone Number via Auto-Reply

To verify the email was active within the challenge context, I sent a simple “Hi” message to jimleepro1@gmail.com. It returned automatic reply came back containing an email signature which had below contents:

Jim Lee
Cybersecurity Consultant
jimleepro1@gmail.com
+40 743 321 239
L33T Security
Pentesting · Red Team · Consulting

Phone number confirmed: +40 743 321 239

The country dialing code +40 indicated Romania, this forms a very useful early geolocation signal before the final confirmation. Now I have all I need to continue my investigation.

CountryCode.org

<https://countrycode.org> › [romania](#) :

Romania Country Code +40

This page details Romania phone code. The **Romania country code 40** will allow you to call Romania from another country. Romania telephone code 40 is dialed after ... [Read more](#)

Step 5 - Threads Account → Photo Geolocation

Searching for associated accounts surfaced a Threads and Instagram profiles:

“jiml33t”

A post on the account was made on the last run before "the big day" and that Lee was heading to get coffee at his favourite French supermarket via tram. I had to look into one critical clue in all this of course.

Threads

<https://www.threads.com> › [@joshphilipross](#) :

In the photo, a visible sign on the left side of the road read:

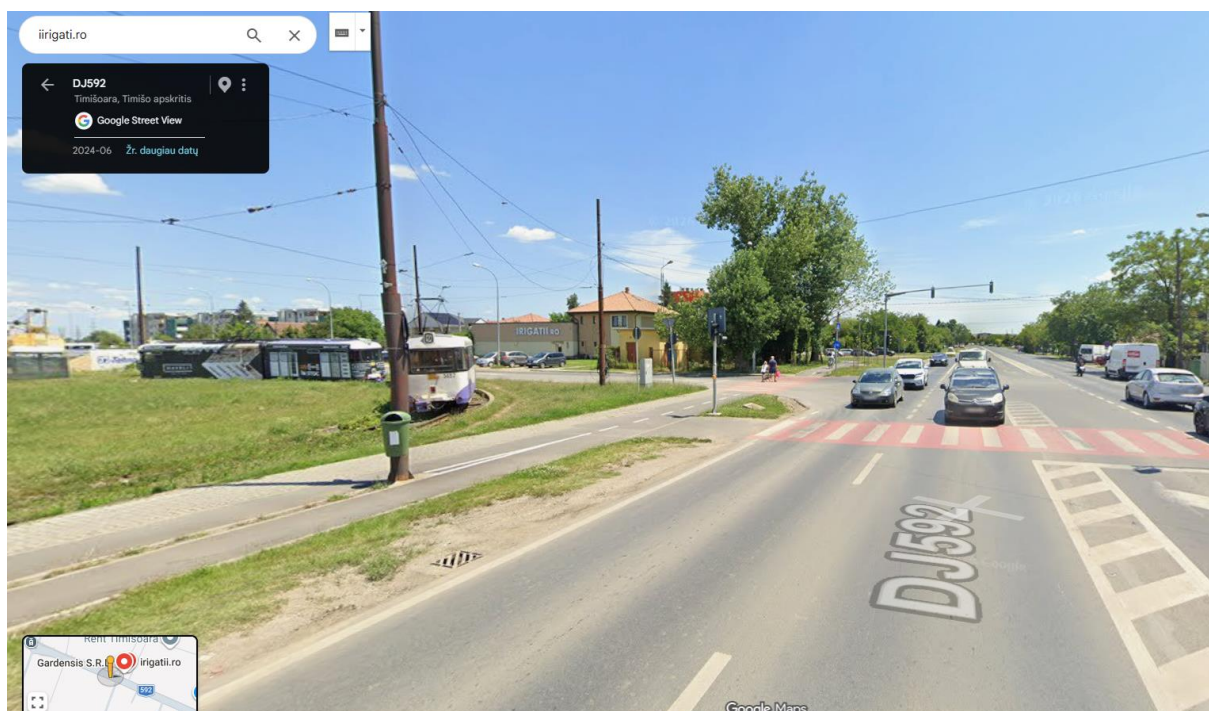

IRIGATII.RO

Searching for irigatii.ro Romania returned a business location result. Opening it in **Google Street View** allowed for a direct visual comparison against the Threads photo. The following elements matched:

- The IRIGATII.RO sign
- Yellow/orange building in the background
- Road layout and direction
- Tram infrastructure and overhead wires
- Camera angle and surrounding environment

Google Maps pinpointed the location to **DJ592 in Timișoara, Timiș County, Romania.**

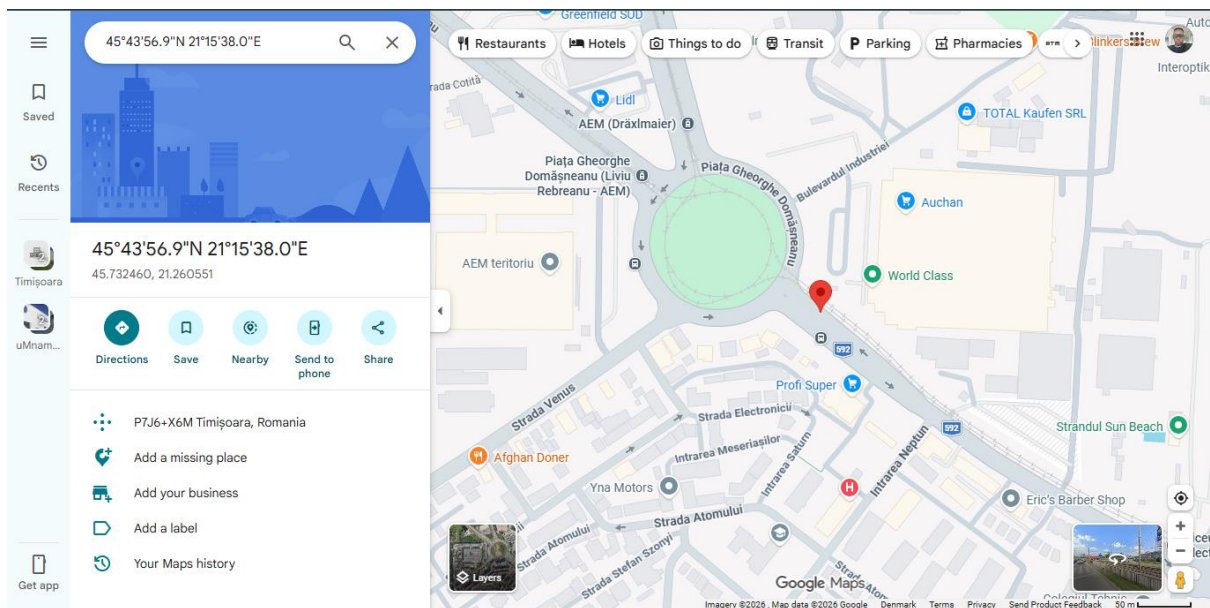

City confirmed: Timișoara

Step 6 - Tram Station Identification

With the city confirmed as Timișoara and the general street location known, the final step was identifying the specific tram station Jim used on **07 May 2026**.

Cross-referencing the photo location with Timișoara's tram network, the closest and most logically consistent station was:

Tram station confirmed: Piața Gheorghe Domășneanu

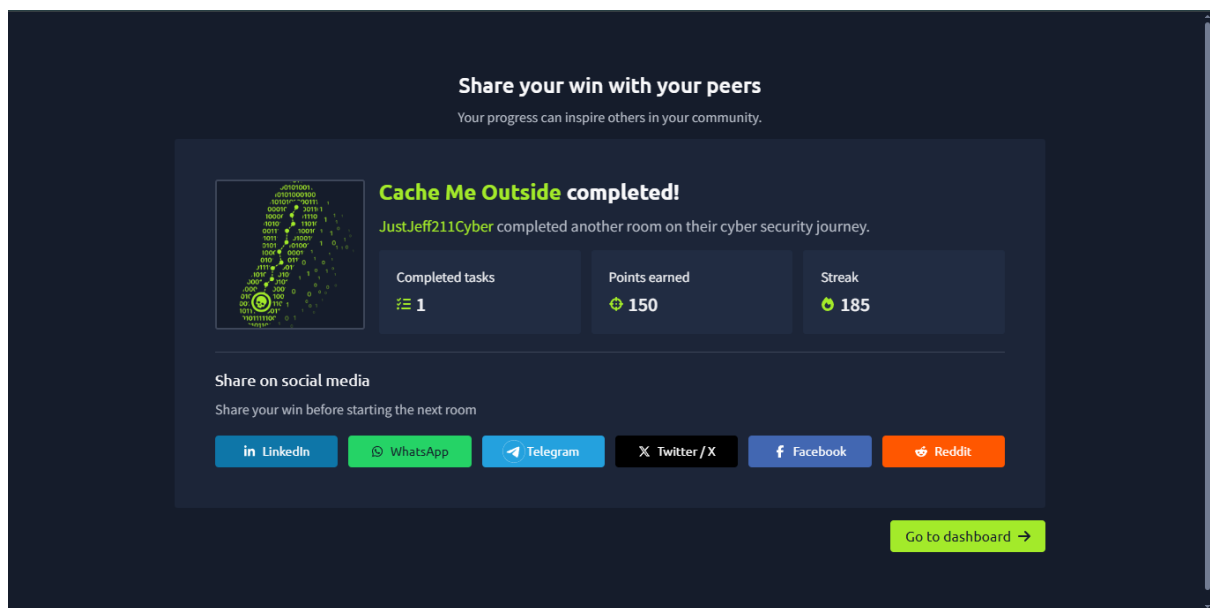

Summary of Findings

Question	Answer
Subject's full name	Jim Lee
GitHub username	jiml33t
Email address	jimleepro1@gmail.com
Phone number	+40 743 321 239
City	Timișoara, Romania
Tram station (07 May 2026)	Piața Gheorghe Domășneanu

Key OSINT Takeaways

1. **Git commits leak email addresses.** Always configure git config --global user.email carefully and consider using a no-reply GitHub address.
2. **Fitness apps are underestimated OSINT sources.** Komoot, Strava, and Garmin profiles are often public and contain linked social accounts.
3. **Email auto-replies can expose organisational details.** Out-of-office or signature data is a low-friction way to collect phone numbers, job titles and company names.
4. **Photo geolocation is powerful.** A single sign in the background of a casual post was enough to pinpoint a street in Romania.
5. **Username consistency across platforms breaks anonymity.** Using the same handle (jiml33t) across Komoot, GitHub and Instagram/Threads created a clear and traceable trail.
